

Autism Spectrum Disorders (ASD) Study at the National Institutes of Health

The Eunice Kennedy Shriver
National Institute of Child Health and Human
Development at the National Institutes of Health is
accepting children with Autism Spectrum Disorders
(ASD) for a clinical research study of dietary
cholesterol supplementation in children with ASD
who have abnormally low cholesterol.

Your child may qualify if he/she:

- is 4 to 11 years of age.
- has a diagnosis of Autistic Disorder, Asperger Disorder, Pervasive Developmental Disorder-Not Otherwise Specified (PDD-NOS).

Your child may not qualify if he/she:

- has had a seizure in the last 3 months.
- has a diagnosis of Rett Disorder, schizophrenia, Smith-Lemli-Opitz syndrome, or Fragile X syndrome.

What is involved:

This outpatient study may include diagnostic evaluation, psychological testing, and supplementation of dietary cholesterol for those who are eligible.
